

STAINLESS STEEL CENTRIFUGAL PUMPS
SELF PRIMING PUMPS

APPLICATIONS

The CMH series pumps consists of a single centrifugal impeller. These pumps have an essential form and are the result of precise design choices, are made to obtain specific performance characteristics. The impeller, mounted on the end of the motor shaft, faces directly the suction opening machined in the pump. The shape of the impeller transmit a radial motion to the fluid from the center outwards, with minimum hydraulic loss. The blades inside the impeller channel transfer energy to the fluid both in the form of pressure and increase speed. After leaving the fluid passes to the volute and tapered diffuser which transform part of the kinetic energy into pressure energy..

MATERIAL

- Casing in CI/Impeller in Bronze, Stainless steel (optional)
- Shaft in SS 303
- Mechanical seal in Carbon/Ceramic/NBR

TECHNICAL DATA

- TEFC 2 pole motor
- Insulation Class F
- Protection degree IP54/IP55
- I-230V+/- 10% 50HZ, 3-230/400V+/- 10% 50HZ
- Permanent split capacitor and automatic thermal overload for single phase version
- Thermal protection to be provided by the user for three phase version

PERFORMANCE RANGE

- Flow rate up to 160/min (3.6 m³/h)
- Dynamic head up to 46m

OPERATING LIMITS

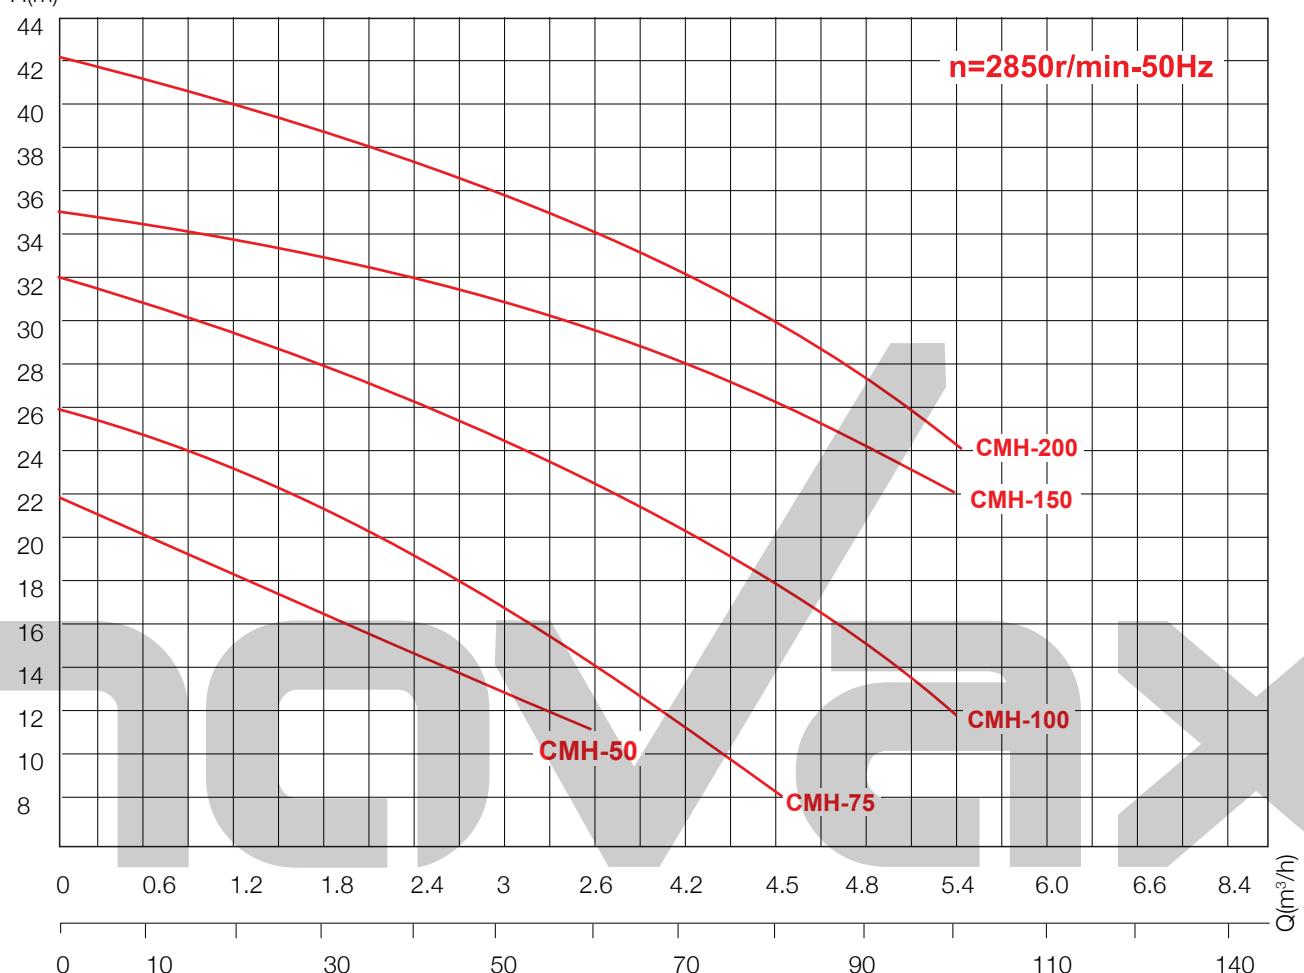

- Suction lift up to 7m
- Fluid temperature up to +60°C
- Maximum ambient temperature +40°C

WORKING PRINCIPLE

The 2CMH series consists of CENTRIFUGAL PUMPS with two BACK-TO-BACK IMPELLERS, working in series.

The first impeller directly faces the suction opening machined in suction body. The second impeller is housed back-to-back to the first in the delivery body. The shape of the impellers transmits a radial motion to the fluid from of pressure and an increase in speed. After leaving the first impeller the fluid passes to the volute in the suction body connected to the second impeller suction chamber where it receives an equal energy increase. After leaving the second impeller the fluid enters the volute of the delivery body and the tapered diffuser which transform part of the kinetic into pressure energy. The axial hydraulic thrusts are perfectly balanced by the back-to-back installation of the two impellers on the same shaft, thus avoiding any overload on the motor bearings.

MATERIAL

- Casing in CI/Impeller in/Bronze, Stainless steel (optional)
- Shaft in SS 303
- Mechanical seal in Carbon/Ceramic/NBR closed and externally ventilated, suitable for continuous duty.
- Insulation class FB (up to 0.75kw)

TECHNICAL DATA

- TEFC 2 pole motor
- Insulation Class F
- Protection degree IP54/IP55
- 1-230V+/-10% 50HZ, 3-230/400V+/-10% 50HZ
- Permanent split capacitor and automatic thermal overload for single phase version
- Thermal protection to be provided by the user for three phase version

PERFORMANCE RANGE

- Flow rate up to 180 l/min (10.4m³/h)
- Dynamic head up to 65m

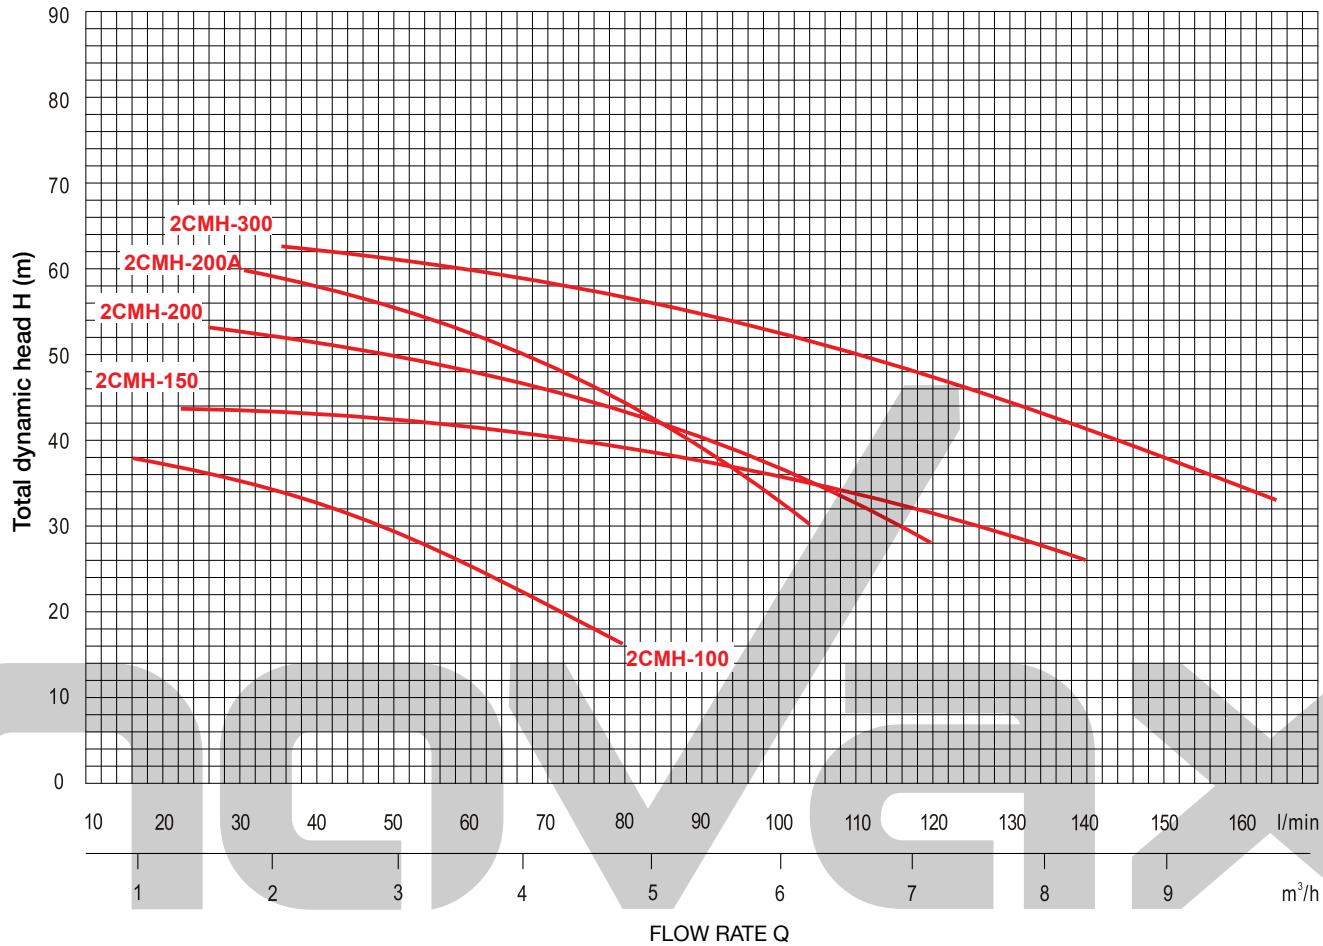

OPERATING LIMITS

- Suction lift up to 7m
- Fluid temperature up to +60°C
- Maximum ambient temperature +40°C
